

What is IPL Hair Removal?

Removal of unwanted hair is achieved with the Broadband Intense Pulsed Light (IPL). Highly controlled flashes of light are selectively absorbed by hair-filled follicles lying below the surface of the skin. The absorbed light heats the hair, which damages or destroys the regrowth potential of the follicle, all without damaging the surrounding tissue.

How does IPL Hair Removal Work?

The IPL treatment uses very short pulses of intense light to remove unwanted hair and end the daily routine of waxing or shaving. Your skin is left looking and feeling more silky and smooth. The Active Optical technology eliminates pain and delivers long lasting results. The patented delivery technology spreads a wide, even beam of energy directly to a hair follicle anywhere on the body. Safe results can be achieved on the face, head, back, arms, legs and bikini areas.

IPL

Enjoy the benefits of **Permanent Hair Removal** with a safe and pain free technology to get rid of unwanted hair anywhere on your body.

Safe for Any Area of the Body

- Face
- Neck
- Back
- Arms
- Underarms
- Legs
- Bikini

Effectively Treats:

-

Acne

- Pigmentation
- Wrinkles
- Vascular Blemishes

FAQs

Q: How many hair removal treatments will I need?

A. The number of treatments you may require depends on a number of factors. First is the area you wish to have treated and its hair density. The next important consideration is where your hair is in its three stage growth cycle. Hair removal can only be effective when hair is in its growth stage. Approximately 1/3 of your hair is in the growth stage at any time. Therefore, you must have between three and five treatments, once every forty five days, to treat all the hair during the growth phase.

Q: Am I a good candidate for IPL technology?

A. If your hair is brown or black, you are a good candidate. Blonde hair can be more difficult to remove.

Q: Will it hurt?

A. You will feel a warm sensation at the moment of the flash with very little discomfort.

Q: When am I going to see results?

A. Normally you should begin to see results after the first two sessions.

Q: What are the contraindications?

A. Some medications should be avoided and no sun tanning 15 days prior and after the procedure.
